DETAILED ACTION

Claim Objections

1. Claim 20 is objected to because of the following informalities: line 4 reads "a first a sub-region" should be - - a first sub-region - -. Appropriate correction is required.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Ikenoya, USP 4,493,677.

Re clm 1-20, Ikenoya discloses a continuously variable transmission comprising:

- A primary pulley (8)
- A secondary pulley (10)
- A drive belt (11)
- A fan blade (44)
- A case (Figures 2 and 3)
- A shroud wall (attached at 47 near character 45, Figure 2) arranged independently from an inner surface of the casing, and the shroud wall has a base (where attached) and free end (where it is unattached) and near the intake region

Art Unit: 3682

- A scrolling surface (inside surface of casing)
- A clearance gradually increasing over a quarter of said one of the pulleys (see Figure 2, pulley 16)
- An intake port/intake region (45, moves the air from the chamber A to pulley chamber B)
- An exhaust port/discharge region (open area around pulley 10 that allows air to travel from Chamber B to Chamber A).
- a unidirectional airflow plate (48) provided in said case and attached to the scrolling surface
- wherein said shroud wall and case represent a combination that is monolithic (combined together into one part)
- wherein an interior surface of said case extends to opposite sides of said shroud wall so as to have said shroud wall increase an amount of scroll surface conformance to a rotation travel path of an outer surface of said one of the pulleys (see Figure 2)
- wherein said shroud wall has a curvature which follows along a region of said one of the pulleys (8) which region includes a first sub-region where in said pulley is in contact with the belt (shroud wall to the left of intersection point with belt) and a second sub-region wherein said pulley is free of contact with said belt (where shroud wall intersects with belt in Figure 2).

Response to Arguments

4. Applicant's arguments with respect to claims 1-20 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).
